AAMI GOWN BARRIER LEVELS OF EHSP

The Association for the Advancement of Medical Instrumentation (AAMI) standards are designed to help medical professionals for the safe use of medical devices. AAMI introduced the voluntary standard ANSI/AAMI PB70:2012, Liquid Barrier Performance and Classification of Protective Apparel and Drapes Intended for Use in Health Care Facilities, to determine key identification measures for the appropriate selection of protective apparel and drapes, such as medical gowns, for use in healthcare facilities. The AAMI gown classification stems from four levels of barrier performance.

AAMI LEVEL 1 **Minimal Fluid Barrier Protection:** Used for daily patient care, when there is little to no risk of fluid exposure. Generally not used in the OR.

AAMI LEVEL 3 **Moderate Fluid Barrier Protection:** Used for the widest range of surgical procedures, where the risk of fluid exposure is moderate.

AAMI LEVEL 2 **Minimal to Low Fluid Barrier Protection:** Used when there's only a slight risk of fluid exposure, for minimally invasive surgical procedures such as lumps and bumps.

AAMI LEVEL 4 **Highest Fluid and Microbial Barrier Protection:** Provides protection against blood-borne pathogens in critical zones; used for long, fluid-intensive procedures.

STANDARDS FOR ANSI/AAMI PB70:2012 GOWNS

The requirements of the European Union's EN13795 standard for the barrier capacity of surgical gowns mainly include resistance to dry and wet microbes and resistance to liquid penetration. Surgical gowns are divided into standard surgical gowns and reinforced surgical gowns according to different purposes. Ordinary surgical gowns are used for routine surgery with less bleeding, and reinforced surgical clothes are used for surgery with longer operation time and more bleeding, such as orthopedic surgery and gastrointestinal surgery.

DEFINITION OF KEY TERMS:

Gown Selection Made Easy

Resistance to microbial penetration (dry state) (log10CFU) represents the bacterial liquid with a concentration of 10⁸ CFU/g, and shake the bacteria for 30 min. For the purpose of this standard, log10CFU ≤ 2 means a maximum of 300 CFU.

Resistance to microbial penetration (wet) (BI) represents the lowest significant difference (LSD) of BI reached 0.98 in the 95% confidence interval, which is the lowest value between the two materials, and the difference is not within 0.98BI. BI=6.0, Indicates no penetration in this standard.

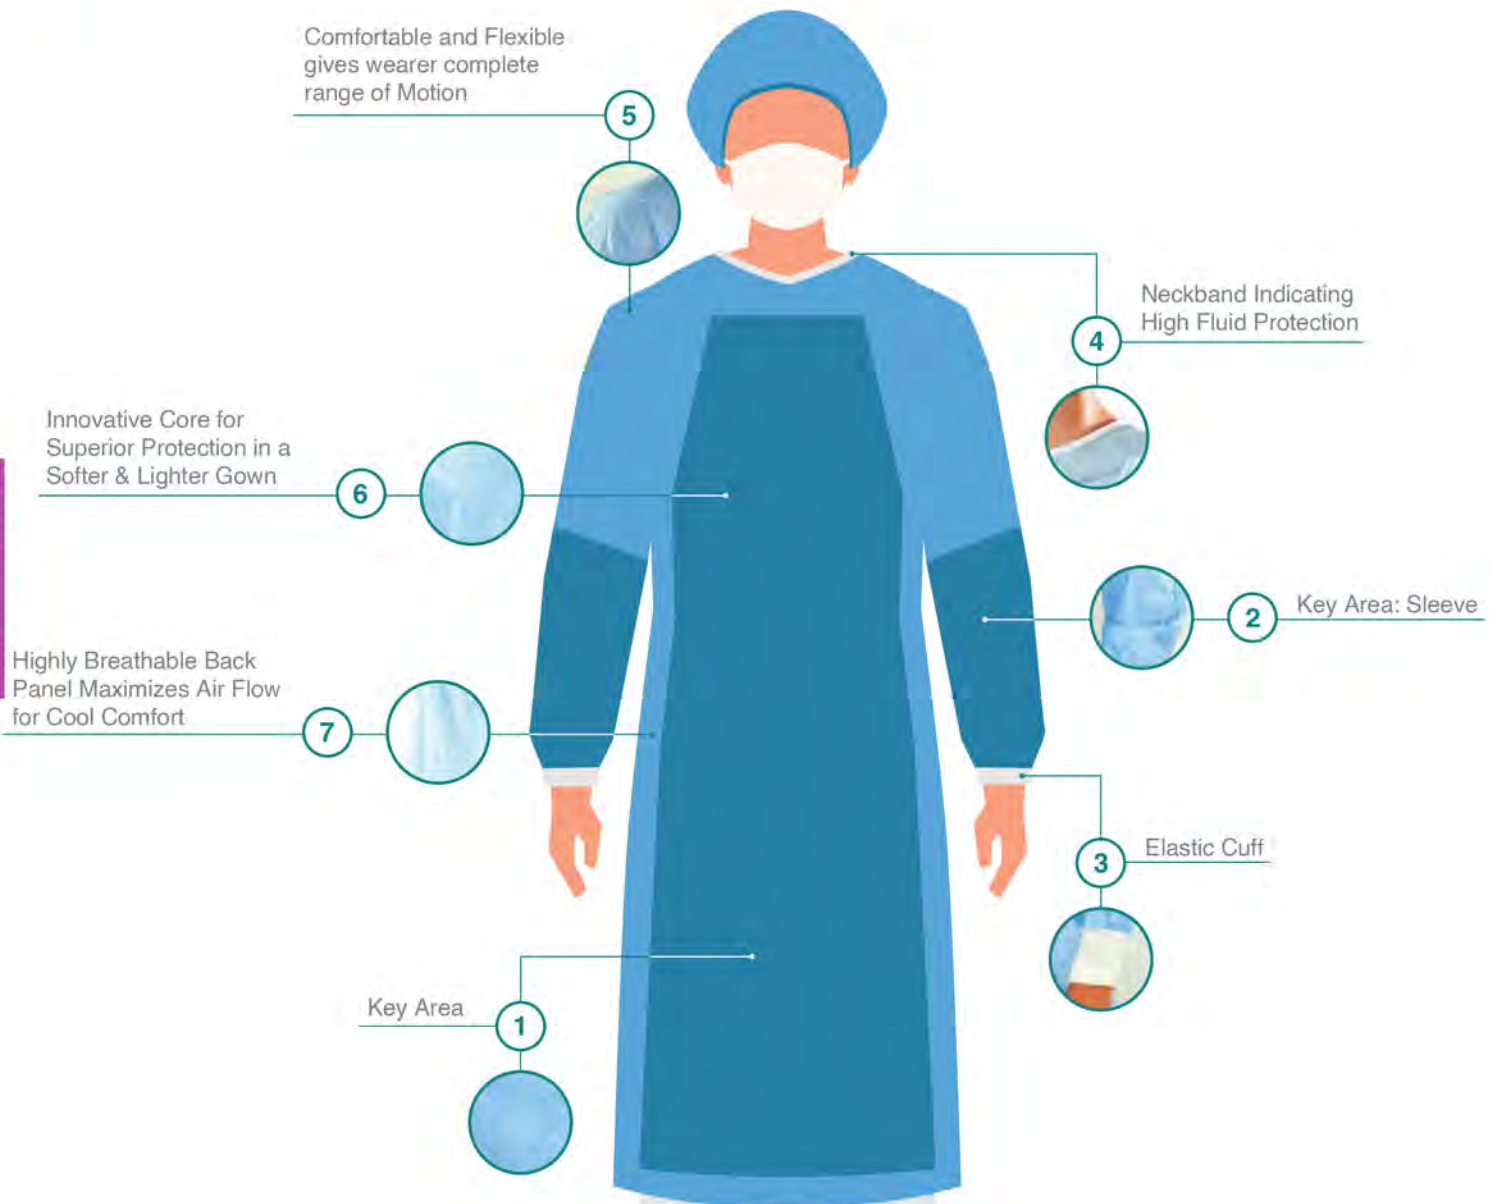

Key area Strictly maintain the sterile area during operation, including the front part of the waist, the upper part, the arms.

Sub-key area Areas with less sterility during operation, including the back, front and lower waist.

ASTM FACE MASK PERFORMANCE LEVELS OF EHSP

Choosing a suitable mask in its proper place is one of the critical points for your PPE protocols. The American Society for Testing and Materials Standards (ASTM) is an internationally recognized organization that develops voluntary guidance for various industries and products to aid in quality control, product safety, and recommended usage and application.

ASTM standard F2100-11 provides specifications for face masks. ASTM levels for the face masks are classified into three levels of protection (low, moderate, high) to help clinicians decide which mask is appropriate for the task at hand. The European equivalent of ASTM Levels are classified in Types; Level 1 is equivalent to Type I, Level 2 is equivalent to Type II, Level 3 is equivalent to Type IIR, and N95 is equivalent to FFP2.

LVL 1 Level 1 masks are suitable for brief examinations, exposing radio-graphs, and cleaning tasks.

LVL 2 Level 2 masks are preferable for procedures that involve a moderate level of aerosols, such as hand instrumentation and sealants.

LVL 3 Level 3 masks have a high level of protection and are used for procedures involving high levels of aerosols such as ultrasonic scaling, surgical procedures, and crown preparation.

Medical face mask materials covered under ASTM specifications are designated as one or more of the following performance levels based on the barrier performance properties of the materials used only.

DEFINITION OF KEY TERMS:

MASK SELECTION MADE EASY		FLUID RESISTANCE represents the mask's resistance to penetration by synthetic blood under pressure (mmHg). It measures the ability of a mask's material construction to minimize fluids from traveling through the material and potentially coming into contact with the wearer. The higher the fluid resistance (filtration), the better the protection.
		BFE (Bacterial Filtration Efficiency) represents the percentage of aerosol particulates filtered at a size of 3 microns. It is the measure of the efficiency of the mask in filtering bacteria passing through it.
		PFE (Sub-micron Particulate Filtration Efficiency) represents the percentage of sub-micron particulates filtered at 0.1 microns. PFE is the measure of the efficiency of the mask in filtering particles passing through it. The size of the particles filtered is critical.
		DELTA P (Differential Pressure) represents the pressure drop across the mask or resistance to air flow in mmH ₂ O/cm ² (European equivalent is shown as Pa/cm ²). This determines breathing resistance – the higher the Delta P, the less the breathability, but the better the filtration.
		FLAME SPREAD is a ranking derived by laboratory standard test methodology of a material's propensity to burn rapidly and spread flames. According to ASTM standards it is divided into classes and the European equivalent is EC directives.

KNOW YOUR MASKS

- 1** The extra-long nose-bridge, enclosed aluminum nose piece forms a strong seal to increase protection.
- 2** The elastic neckband provides ease in wearing and comfort in removal from the face during no-risk zones.
- 3** The elasticated earloop is durable, breathable and comfortable to apply.
- 4** Seamless crimping makes it comfortable to wear.
- 5** Hydrophobic spunbond outer layer for maximum protection against fluids.
- 6** Soft and absorbent spunbond inner layer.
- 7** Meltblown filter layer for protection against viruses, bacteria and airborne particles.
- 8** Anti splash and anti splatter fog free eye shield.
- 9** Vapor barrier to prevent fogging.

BENEFITS OF S-MASKS:

- While driving alone and at no-risk zones, we usually tend to remove our masks, and in the process, we forget in the car or lose our masks, but with the S-mask you don't need to worry about it.
- Our kids lose masks more often, but with EHSP S-mask for Kids, we have solved this problem. Your kids will not lose their masks during no-wear zones.
- We not only care about your safety but also about your comfort and our S-Masks will provide the highest level of comfort a Mask can provide for you and your cute kids.
- S-masks not only provide a high level of comfort, but it saves your money and the climate by saving no.s of masks.

What to Do

What not to Do

EHSP-GUIDE MASK

We are good innovators

We do it
fast

&

We do it
accurately

Prolonged use of face mask can sometimes cause discomfort to the wearer. The EHSP S-Mask gives the wearer the liberty to easily unwear the mask at no risk-zones without compulsion of putting it in a pocket or a purse. Our Face Mask range of products gives our customers to choose between S-Masks and normal masks when ordering from EHSP Products.

Revised Certificate
AAMI PB70 Liquid Barrier Performance and Classification

Test Article: EHSP 820-3 Gown

A total of thirty-two (32) specimens were tested from thirty-two (32) test articles. Specimens were chosen from the critical zones as described in AAMI PB70 for an isolation gown. Test specimens were subjected to the following tests:

AATCC 42 Water Resistance: Impact Penetration Test
AATCC 127 Water Resistance: Hydrostatic Pressure Test.

Based on the results of the testing as summarized in the attached reports, numbers 2004657 and 2004658, the product listed above was classified as AAMI PB70 Level 3.

Revision Statement: This certificate was revised to correct the Istanbul address and to add the USA address. The test results were not affected.

Record Storage: All raw data pertaining to this study will be maintained in the LexaMed archives for a minimum of 5 years.
